About me

It has been over five years in marketing, and I still think the work starts with the person on the other side. I learned that by researching padel players for my master's thesis, then playing alongside them every week, coaching a football team, and standing in a stadium as one of a thousand musicians. What a team gets from me is someone who asks about the audience before asking about the brief, who can build from nothing when there is no playbook, and who would rather understand people properly than talk about them cleverly.
